Diabetes is a condition that causes your blood glucose (or blood sugar) levels to rise too high. These high blood glucose levels can cause damage to your body in different ways, and diabetes makes you more likely to have heart disease or a stroke.

How it works: Your body makes and uses insulin (a hormone) to keep your blood sugar in the normal range. When you have diabetes, your body doesn’t make enough insulin or can’t use insulin efficiently. This causes your blood sugar levels to go too high.

More than 30 million Americans have diagnosed and undiagnosed diabetes.

Common Symptoms

- Cuts/bruises that are slow to heal
- Feeling thirsty often
- Extreme fatigue
- Urinating often
- Blurry vision

If you have diabetes, there is a lot you can do. Start with a doctor’s appointment to make a plan.
